

The new Kronen Juicer KE-5500

The new Kronen Juicer KE-5500

A proper commercial juicer should be:

- Robust and strong
- High-efficient, but silent
- Safe and easy to handle
- Hygienic and easy to clean

... and if possible made in stainless steel.

We made it to our business and the result is the heavy-duty KE-5500.

Every part is removable - quickly and easily.

The KE-5500 fulfills the requirements of bars, takeaway outlets, restaurants, hotels and canteens producing high quantities of fruit and vegetable juice.

Technical Details:

Power: 800 / 1500 W
 Speed: 5.500 r.p.m.
 Voltage: 230V / 1 / 50Hz
 Weight: 16 kg
 Dimensions: 90 x 470 x 320 mm.

20 to 30% more output than other regular juicers due to a powerful motor operating with 5.500 r.p.m. The extra wide feed tube ensures less pre-cut work.

Most important: The result is a perfectly pure juice and a notably dry pulp. The low noise level allows operating right in front of the customer. Of course the KE-5500 is conform with actual CE regulations.
